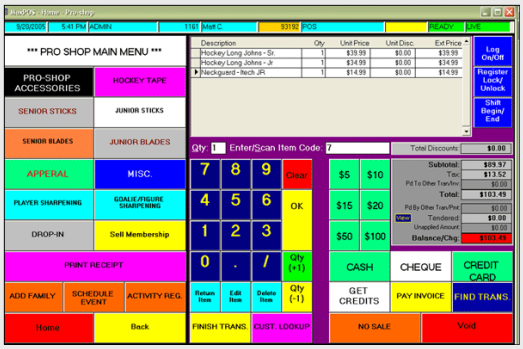
MaxEnterprise Point of Sale Solutions

Easy to use Point of Sale Software with Full Inventory Management

Point of Sale Interface



Looking to automate your receipt process while more quickly dealing with a customer? Then look to streamline the financial front end of your business operations with MaxEnterprise Point of Sale Interface. Integrate your Front Desk, Admissions, Pro Shop, Concessions, Kiosks, and more. Unlike traditional POS systems for retail and restaurant applications, our software is specifically designed for sports and recreational related facilities.

The POS software integrates with all other applications thus giving you and your customer additional flexibility within your complex (i.e. a customer can register for a class, reserve a facility, and buy a lunch package all through one interface).

Take your POS software to the ultimate ease of use by attaching bar code scanners, receipt printers, cash drawers, and touch screens. Our POS-Inventory solution may be purchased as a stand-alone Point of Sale system or used in conjunction with other Maximum Solutions products.

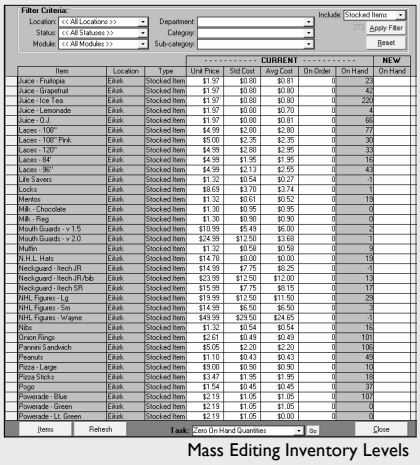
Point of Sale Benefits and Features

- Fully integrates into the MaxEnterprise customer database as well as the Facility, Registration. Membership, and Equipment Rental applications
- Apply different register setups at unlimited locations (i.e. Front Desk, Concessions, Pro Shop)
- Control Point of Sale access and features by administrator passwords
- Create quick pick buttons for your most purchased items
- Track shift sales by user
- Create customized receipts with headers and footers.
- Create real-time reports that identify best-selling items, most profitable items, most productive employees, detailed sales history by cashier, department, category and more.
- Easy to create templates which are fully customizable by font, color and shape.

Inventory Management Software

The Inventory program is designed to increase your profits and provide effective inventory control and flexible pricing abilities. This program allows you to use multiple costing methods, including LIFO, FIFO, Average, or Standard configurations. Inventory quantities automatically increase and decrease when products are sold, rented or refunded through Point of Sale or any other MaxEnterprise Applications.

Inventory value and cost of goods sold are also updated to the general ledger by attaching GL link. With reorder reports and vendor tracking features, you can optimize your stock on hand, gain valuable cost-of-goods-sold information, and order popular selling products, thus maximizing your sales while also minimizing your inventory investment. Inventory can be transferred from one site to another through internal controls.



Mass Editing Inventory Levels

Inventory Management Benefits and Features

- Fully integrates into the MaxEnterprise customer database as well as the Facility, Registration. Membership, and Equipment Rental applications
- Create multiple inventory locations and transfer items between these locations
